IntegrateHub

Faster, Lower-Risk Integration Migration to SAP Integration Suite

INTEGRATEHUB

Available on
SAP Store

SCAN

IntegrateHub helps organizations move integrations from SAP PI/PO, Neo, and non-SAP middleware to SAP Integration Suite, with built-in assessment, testing, and documentation to keep programs on track.

30–50% faster migration execution using automation-driven assessment and conversion.

Lower migration risk through automated analysis, testing, and validation.

Freedom to migrate SAP and non-SAP middleware without architectural lock-in.

Pre-built accelerators for TIBCO, MuleSoft, Boomi, BizTalk, MQ, webMethods, and Sterling.

API-first and event-driven modernization embedded directly into the migration process.

Hybrid and edge-ready migrations, including support for Edge Integration Cell where required.

Migration Assessment FREE

Step 1: Define Scope (Information Gathering & Analysis)

1 WEEK

Inputs / Access Required

- Migration questionnaire
- Review of current architecture and setup (including all interfaces and applications)
- Execute automated assessment tool to evaluate the existing environment (7.31 SP28+, 7.40 SP23+, 7.5 SP06+)
- Access to the current system (Optional)
- Access to Customer Subject Matter Experts (SMEs)
- Two to three technical calls (1 hour each) with the customer

Step 2: Migration Plan (With Customer Approval)

<1 WEEK

Migration Plan

- Migration Assessment Report (includes complexity and sizing)
- Adaptor Analysis as part of the migration assessment
- Overview and education on SAP Integration Suite
- Discussion on migration benefits and Integration Suite capabilities

Migration Execution PAID

Step 3A: PI/PO Detailed Analysis

<1 WEEK

- Object Analysis for the objects identified as adjustment and evaluation required in SAP standard analysis tool
- **PI/PO Analysis:**
 - Java code analysis and migration plan
 - SAP ABAP Custom Code analysis
 - CoreAssess.AI will help analyse the ABAP Custom Code
- **Benefits:** Firm timeline estimation, alternative suggestions for existing code/objects

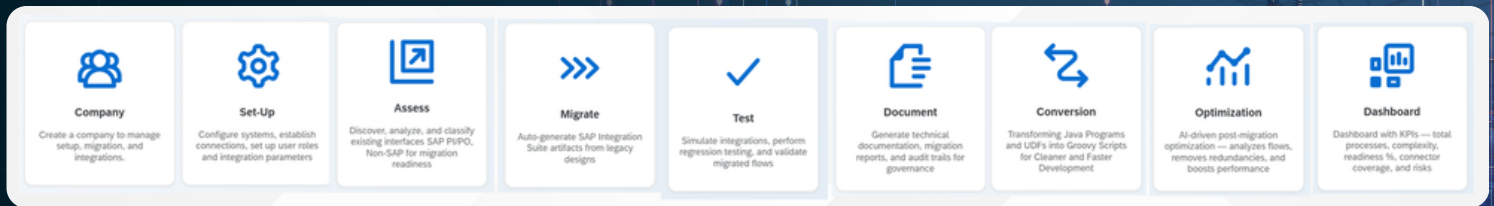

Step 3B: Non-SAP to SAP Integration Suite Migration

- Support for migration from other middleware platforms to SAP Integration Suite
- Leverage the Boomi Migration Tool for streamlined transition
- Additional support for other third-party middleware solutions

STEP 4: Migration Preparation & Execution (Execute migration activities)

Migration Execution

- Onboard customer as a ramp-up user for SAP Integration Suite
- Set up environments (Development / QA / Production)
- Migrate integration artifacts
- Perform testing and fine-tuning
- Go-live with the migrated solution
- Configure production integrations and applications
- Monitor system for post-migration issues
- Final enablement and customer sign-off

What Sets IntegrateHub Apart?

Migration with modernization built in

Moves integrations while embedding API-first and event-driven patterns, enabling clean-core aligned modernization, not just technical conversion.

Non-SAP migration expertise

Purpose-built accelerators for TIBCO, MQ, BizTalk, WebSphere, webMethods, Sterling, Boomi, and MuleSoft, addressing legal and tooling gaps.

Hybrid-ready by design

Supports cloud, on-premise, and regulated environments, including Edge Integration Cell, without forcing architecture changes.

Aligned with SAP Migration Factory

Complements SAP tools with proprietary accelerators for deeper assessment, automation, and platform consolidation.

Enterprise-proven at scale

Delivered by a certified SAP Migration Factory partner, backed by large-scale global migrations across complex enterprise landscapes.

PROJECTS DELIVERED
